School of Management, Fudan University, Shanghai, China

EDUCATION

Fudan University, China *09/2022 - Present*
Enrolled in MPhil-to-PhD track; currently in third year of the PhD
Faculty Advisor: Junye Li
GPA: 3.75/4.0

University of International Business and Economics (UIBE), China *09/2018 - 06/2022*
Bachelor of Economics
GPA: 3.79/4.0

RESEARCH INTERESTS

Empirical Asset Pricing, Demand System Asset Pricing

RESEARCH

Working Papers:

Inside a Bubble: Investor Demand over Its Life Cycle(with Weihua Chen, Shushu Liang, and Donghui Shi)
Submitted upon invitation at **Journal of Financial and Quantitative Analysis**

- **Abstract:** What is the relative importance of different bubble mechanisms over the life cycle of a bubble? Using account-level data covering 18 million retail accounts and all institutions at a major stock exchange and a demand system adapted to the Chinese market, we find that the 2015 stock market bubble begins with changes in stock characteristics. Both decomposition and counterfactual analyses show that retail trading —through new investor participation and leveraged trading —plays an important role during the bubble boom-bust. Our results accord with the classic narrative of Kindleberger (1978)'s and offer insights into other bubble episodes.
- **Selected Presentations (prior to my joining the project):** SFS Cavalcade (2023), Berkeley Haas (2023), Rochester Simon (2023), Minnesota Carlson (2023), Miami Herbert (2023), AFA Annual Meeting (2023)

Liquidity Risk and Demand Elasticity (with Junye Li)

- **Abstract:** Building on the recently developed demand system asset pricing theory, we offer a novel explanation for liquidity risk from the perspective of investor demand. Using demand elasticity as a proxy of investor demand, we theoretically establish a negative relationship between demand elasticity and liquidity risk, which is subsequently supported by empirical evidence. Our findings show that liquidity risk, measured by the bid-ask spread or Amihud illiquidity, decreases monotonically as demand elasticity increases, and this relationship remains robust to various controls. Furthermore, we demonstrate that demand elasticity, as a key driver of liquidity risk, exhibits robust predictive power for stock returns, compared to traditional liquidity risk measures.
- **Selected Presentations:** MRS International Risk Conference (2025)

TEACHING EXPERIENCE AND PROFESSIONAL SERVICES

Teaching Experience:

Teaching Assistant:

Under **Avanidhar Subrahmanyam** (UCLA Anderson, visiting at Fudan), *Behavioral Finance*, Fudan University *Fall 2024, Fall 2025, and Fall 2026*

Under **Junye Li**, *Machine Learning and Quant Investing*, Fudan University *Spring 2025, Fall 2025, and Fall 2026*

Under **Junye Li**, *Foundation Asset Pricing*, Fudan University *Spring 2023*

Student Teacher:

Financial Statement Analysis and Valuation, UIBE *Fall 2021*

- Delivered review lectures and mentored peers on financial statement analysis and the use of common Chinese financial databases

Comference Organize:

Fudan Internatiional Symposium on AI in Finance, 2025 *Co-Organizer*

SCHOLARSHIPS AND AWARDS

Doctoral Academic Scholarship, First-class (2026)
Doctoral Academic Scholarship, Second-class (2025)
Excellent Academic Scholarship for Master's Students, Second-class (2024)
Maxwealth Fund Scholarship (2023)
Integrated First-class Scholarship (2021, top 5%)
University Outstanding Student (2021, top 5%)

SKILLS

Coding: Python, R, Git, Matlab, Stata
Typography: LaTeX, MS-Office, HTML
Languages: Mandarin (native), English (fluent)
